SMARTWASH 5000

Laundry Cart Washer

Automation at it's finest...

SMARTWASH 5000 is our upgraded version of the SW1500. The SW 5000 will have a **Conveyor Cart Feed System** that will move the carts through two Sanitizer modules.

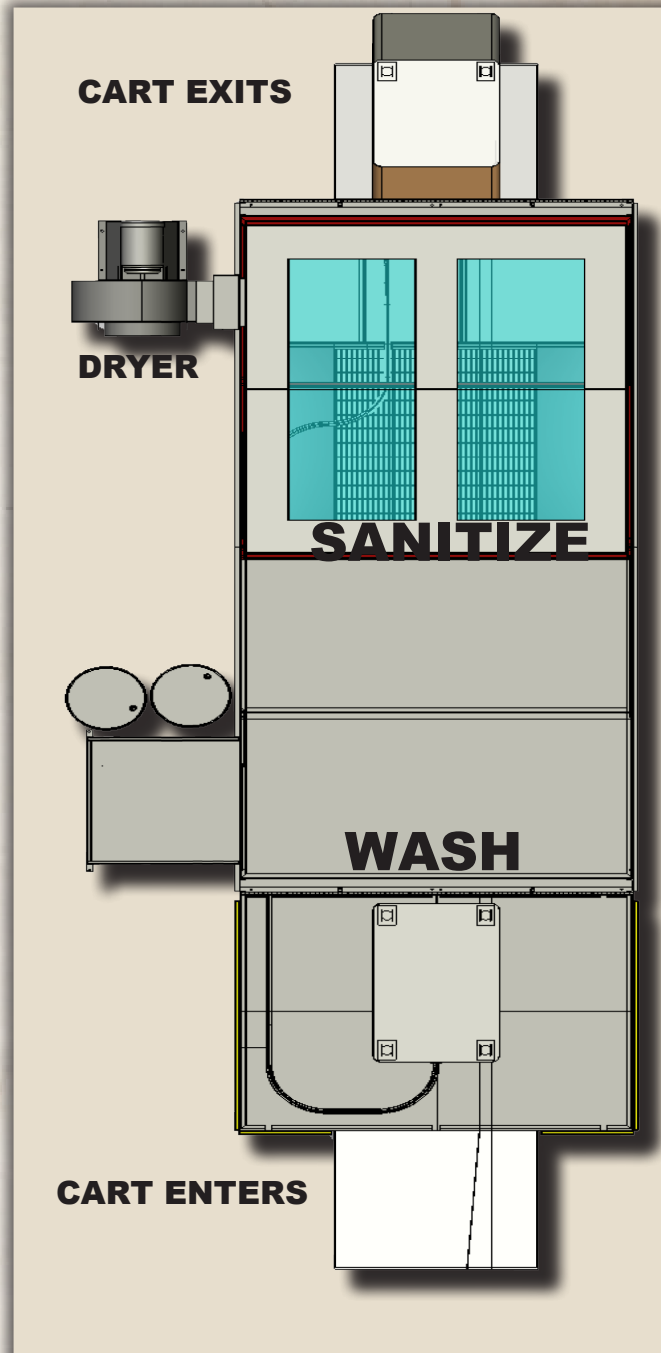

The first module will have the spinner chemical and **high power washing nozzles** where the cart will be washed and have the sanitizer chemical applied.

The second module will be the dryer area which allows a cart to be dried at the same time another cart is being washed and sanitized.

WASH, SANITIZE AND DRY!

SMARTWASH DRYER located on the roof to provide a smaller space requirement. **SMARTWASH Dryer Flow Directors** transport air over the entire structure to control component stress on the sanitizer.

With the ideals of our consumers interest in mind, SMARTWASH 5000 is **affordable, low maintenance** and **efficient** to keep your company moving at full speed.
