To Whom It May Concern:

Automation Dynamics supplied us with our vacuum count stations. We have found them to be responsive, reliable and friendly.

We were looking for a company to help us improve our soil room that could supply us with quality equipment and continued support. A company that provided integrated hardware and software solutions that would improve our productivity, efficiency, and profitability. That is what we got with Automation Dynamics.

The primary reason we purchased vacuum count stations from Automation Dynamics was because they had a better product than their competitors.

We wanted a technology based company. Automation Dynamics has an experienced staff including Microsoft engineers and programmers. Their software is state of the art and set up for future growth, using Microsoft Windows NT as the operating and network system.

We appreciate the ease of which our operators learn to use the system. Training was provided after installation of the equipment and we have found subsequent training of new operators to be easy.

The ergonomic and stainless steel design make Automation Dynamics equipment both user friendly and durable. The equipment is pleasing to the eye and we are proud to display it in our plant.

After the installation of our equipment, Automation Dynamics continued to provide us with service and support. We chose a reliable and knowledgeable company to work with.

My staff and myself like and respect Automation Dynamics and would recommend them to anyone who has similar goals as ours, to increase productivity, substantially reduce labor, increase customer satisfaction through better order processing and verification and to use the latest technology to improve operations.

Sincerely,
Republic Master Chefs Textile Rental Services
